

BULLNOSE MARKER

INCREASE THE VISIBILITY OF CONCRETE MEDIAN ISLANDS

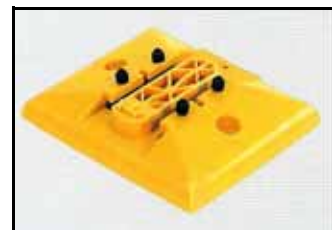

The popular L104 Air Marker used with the QWICK KURB® Longitudinal Channelizer System is now available for mounting on island bullnoses with the L50 base plate. Compared to conventional island mount delineators, the Air Marker offers higher target value both day and night. Each side has 232 square inches of Hi-Intensity retro-reflective sheeting.

Anchoring sets and epoxy kits for concrete and asphalt are available.
